

Building a sustainable future that doesn't cost the earth

Waste management solutions for the
facilities management sector

recycling and recovery UK
www.suez.co.uk

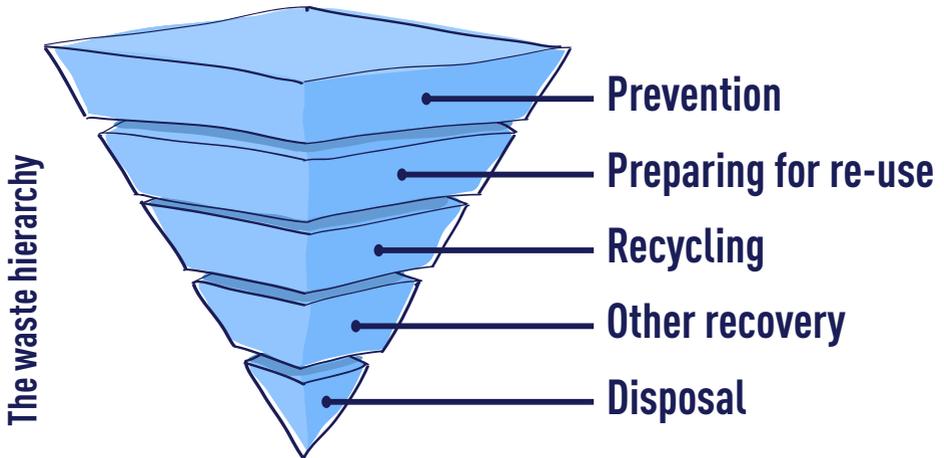

Legislation changes and ambitious net zero targets mean that businesses in the UK are becoming more conscious of sustainability and circularity. As a result, a pivotal role our facilities management customers play in reducing the environmental impact of their clients becomes even more challenging and complex.

Our aim is to help you maximise the value of services you deliver to your customers. Together, we are building a sustainable future that doesn't cost the earth.

Solutions tailored for the facilities management sector

At SUEZ recycling and recovery UK, we offer a suite of integrated waste management solutions tailored specifically for the facilities management (FM) sector.

Thanks to our multifaceted and sector-specific expertise, we prepare our FM customers for the transition to net zero, which the facilities management sector and their customers are embarking on, while ensuring that our solutions are innovative yet practical and commercially feasible. We improve the quality of our customers' services, reduce costs and maximise their operational efficiency, guaranteeing the highest standards of compliance with the latest regulations.

Guided by the principles of the waste hierarchy, we ensure that we work with the FMs not only to help them uphold their green credentials, but to enhance their environmental performance through sustainable procurement, management of their value chain, continuous improvement and reliable data analysis and reporting.

We consider waste prevention a priority. Minimised or prevented waste reduces costs – if waste can be avoided in the first instance, there is no need for recycling or disposal solutions for the materials. Cost reductions realised through waste prevention go hand in hand with carbon reduction, which is critical for the UK transition towards a low carbon economy. As partners, we develop a practical framework for delivery of sustainable facilities management, tracking progress with full transparency.

We are actively helping our FM customers to realise the potential of the waste they generate and the benefits of waste prevention.

SUEZ approach – people, planet, profit

Sustainability is at the heart of everything we do. We have embedded the triple bottom line in our strategy and the three strands of sustainability – social, economic and environmental – across our daily operations. We are actively helping our FM customers to realise the potential of the waste they generate and the benefits of waste prevention. As a triple bottom line company, we focus in equal measure on people, planet and profit and social value creation is something that certainly sets us apart.

Sustainable management of commercial spaces can generate social value and reduce overall impact on the environment. SUEZ is a market leader in social value creation and we support our FM customers by implementing measures that reduce an organisation's carbon emissions while positively impacting the communities in which they operate.

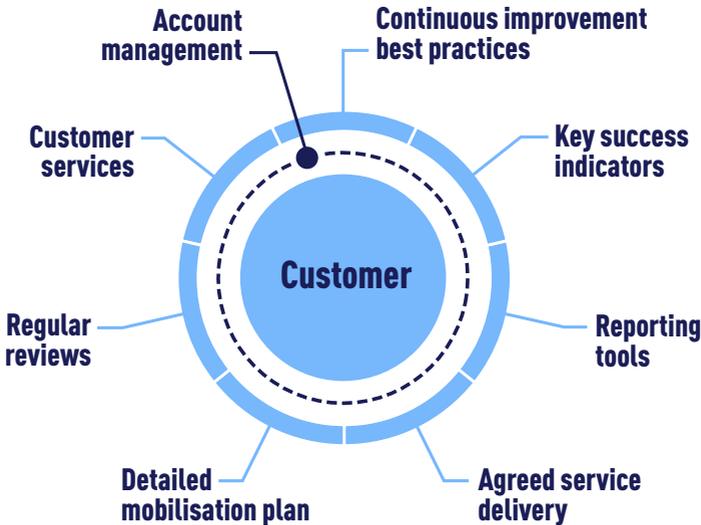

FM waste services

Our core recycling and waste management services are compliant, sustainable and reliable – giving our FM partners peace of mind and confidence that their integrated services package is second to none. We deliver services and support when and where we are needed.

Most requested services include:

- ✔ Food recycling
- ✔ Glass recycling
- ✔ Confidential waste and secure shredding
- ✔ Hazardous waste
- ✔ Dry mixed recycling
- ✔ Mono stream recycling
- ✔ Residual waste collections
- ✔ Integrated waste management service delivered by a network of trusted partners

Dedicated account management and customer hub teams drive continuous improvement initiatives – identifying areas where FM customers can realise cost reductions and implement innovations, resulting in maximised efficiency and delivery of actions supporting their sustainability commitments.

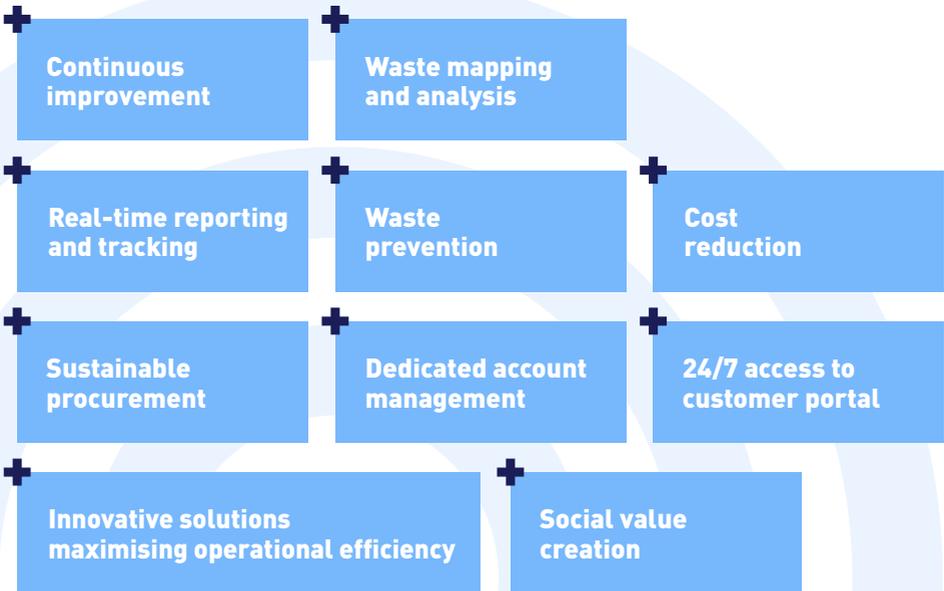

Sustainable facility management

SUEZ's role as a strategic partner working alongside our FM customers is to challenge the norm, foster excellence delivered in partnership and support with our expertise. Our relationships with FM customers go beyond transactional, as we work towards joint strategic objectives.

Our support starts from initial tender submission, assistance with sustainable procurement, waste mapping and comprehensive audits. We assist with supply chain management, tailoring our solutions based on customer needs identified by waste analysis and defined net zero targets.

Our teams deliver seamless service and continuous improvement conforming to the explicit framework targets. Transparent waste tracking and detailed carbon reporting provide our FM customers with insight and evidence of progress towards their sustainable targets.

The strength of partnership

The delivery of environmental, social and governance (ESG) commitments made by businesses in the UK heavily relies on sustainable facilities management practices. Supporting sustainability is a fundamental part of the partnership with our facilities management customers.

As part of our process, we build deep understanding of the organisation's DNA. This knowledge helps us assess the customer's needs and pain points, identify areas that can improve quickly and those that require more time or strategic changes. Sharing pains and gains is pivotal to our partnership.

We work with our customers both at a strategic and operational level ensuring seamless delivery of a long-term vision, as well as day-to-day operations crucial for any facilities management company.

From industry thought leadership to industry leading onsite service, we are there for our FM customers every step of the way.

You will achieve outstanding results with a recycling and waste management service from SUEZ
